

## Summer Intern

We are looking for one energetic summer intern to enhance our small group of imaging experts. Position is located in Tampere, Finland. Your M.Sc., B.Sc. or similar studies should have progressed well and you expect to finish them in a year or two. You have a good skillset and ambition level in SW engineering and optionally also in signal processing. Interest in camera technology is a great bonus. Our team is international and company official language is English. If Android application development, fast prototyping, hacker mindset, Java, C, C++, OpenCV, Python and algorithms raise your excitement to new level, then this is the job for you.

poLight Finland Oy can offer you a great opportunity to use and strengthen your SW engineering skills in an imaging context. In addition, you will get an opportunity to work on a wide range of imaging SW development and camera testing related activities. Our open organization culture will give you good insight about camera technology, company strategic decision making and co-operation with other companies.

poLight Finland Oy is 100% owned by Norwegian company poLight AS. We develop the unique TLens camera actuator technology for small size mass market electronics devices. The technology has extremely exciting future opportunities both in HW and SW and is at the moment under industrialization process. Our customer base is global and we operate in a fabless mode. You get good glimpse about the technology on our web pages: [www.polight.com](http://www.polight.com) → Technology.

If you are interested in this opportunity, don't hesitate to apply. Please send your application letter, curriculum vitae, transcript of record and other relevant information to [manu.hakola@polight.com](mailto:manu.hakola@polight.com) no later than on 28<sup>th</sup> March 2017.

### **About poLight;**

*poLight AS is a Norwegian company headquartered in Horten. Furthermore, poLight has a set-up in France, Korea, China, Finland and Japan. The global poLight team comprising industry specialists having decades of experience in the MEMS and Imaging domains. After more than 8 years of research and development, aiming to replicate the human eye lens, poLight is in the final stage of introducing products to the market with a technology taking astonishing images with instant focus. Its patented proprietary technology enables the production of wafer scale (MEMS) active optical components based on deformable polymers. poLight's TLens offers some crucial advantages to the camera module market such as extremely quick time to focus, and extremely low power consumption and constant field of view and that combined its extremely small size allow for easy implementation of single and multicamera implementations, while achieving high optical quality. The poLight team has proudly developed the fastest focus actuated lenses on the market. See more information at [www.polight.com](http://www.polight.com).*
